December has been a relatively quieter month, FTX Founder Sam Bankman-Fried has been arrested, and let out on bail for a measly $4mm collateral (his parents house), whilst the mainstream media misleadingly reports it was a $250mm bail.

sCrypt released sCryptTS, which is a natural migration of scrypt to Typescript. This opens up coding smart contracts on Bitcoin to a much wider audience of developers. Developers are now able to build their contracts in a much wider recognized programming language.

More can be read here

Ruth from the women of BSV and SirToshi joined Shem on the BitcoinSV channel early in the month for a great conversation.

Click to watch

Sirtoshi highlights some very key points for new people coming to learn about bitcoin. And Ruth discusses the builders and educators, bringing the big picture into view.
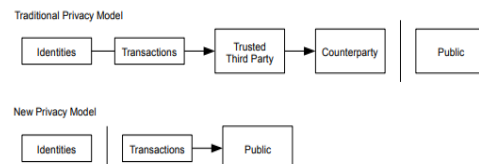

Project Babbage 1st Meeting

Project Babbage launched their first meeting in early December. After an initial "hiccup" with the usual core-ites joining and disrupting the zoom meeting, the meeting was re-launched a few minutes after and went exceedingly well.

Lots of things were discussed, clear defined steps shaped. And targets put up.

A key part of the discussion was identity, and how identity can be brought into the Bitcoin mix whilst keeping the high level of privacy. This would be done by relevant entities issuing Identity Certificates, thus certifying that X person was a verified and identified person.

As part of this discussion, the Metanet Membership Club put itself forward to be the 1st issuer of the upcoming Identity Certificates.

These will be issued to sellers on the new (not yet public) Meta Sales platform, as part of the offering for members of the membership club. Sellers will be able to display their certificates and gain a relatable level of trust so that buyers will be able to buy with confidence.

Happy New Year! 2023

We hope you had a wonderful 2022, with its ups and downs and sideways actions. And a most wonderful Christmas and new year to end it with a smile.

2023 will bring us a whole new year full of wonder and joy and many interesting things happening. Court cases to unfold, new projects and businesses to emerge, and many more people to wake to the wonder of bitcoin.

From all of us at the Metanet Membership Club, Happy New Year!

Click to watch

Kurt Wuckert Jr interviewed Peter Schiff, the infamous Gold Bug. The discussion went on for a good hour with gold coming up numerous times.

Kurt valiantly tried to explain to Peter Schiff multiple times that all Peter's dreams can already be done on Bitcoin, but it seemingly fell on deaf ears whilst Peter simply repeated himself many times whilst not seemingly taking anything in. But we will have a little hope and maybe Peter will be willing to see the practical example that Kurt discussed and proposed to show Peter. Maybe his eyes will be opened.

Follow Kurt Wuckert Jr on Twitter

Christmas comes and goes, but with it each year brings new joy and cheer and brings the family near. We have a lot of work to do and a lot of work ahead, but for now for one and all we hope you had a very

no offense, but script will be a niche like assembler nowadays is for various cpu architectures.

Joel Dalais (MetaNet) 3 days ago
i think so also, most things will end up being 'higher programming languages', like scrypt
👍 1

3 days ago
On the other hand, being one of few specialists mastering this, could be very rewarding when a need arises.
👍 2

Ask a question, get answers. We even have a Bitcoin Beginners channel for those questions you feel are too newbie for the main channel.

3 days ago
This is about having all to nicely set up into a multi incentive creation game, where first incentive must be you need it for own & running ! business case, second: tokenised shared for others (proof of running) (edited)

3 days ago
Btw, working out the most shareable value chain atm ... coming soon

3 days ago
There are few more incentives I can think of too.. but not yet

3 days ago
One strong : consulting middle men talking you into silos and scrum

3 days ago
They need to gooooo

Joel Dalais (MetaNet) 3 days ago
@CSW is there a technical reason why we use OP_ at the start?

3 days ago
C++ coding/naming standards
👍 4
